HDF/MDF SKIRTING BOARDS ARE A PERFECT EXAMPLE OF HOW YOU CAN COMBINE AESTHETICS AND ECOLOGY

Thanks to their beautiful appearance and materials that use recycled wood, they are an excellent solution both visually and ecologically.

These are skirtings that contribute to environmental protection while offering high quality and style. Additionally, each moulding has ecological certificates, which proves their environmental friendliness and gives us confidence that the selected product meets high quality standards.

THE 80TH

A BEAUTY INSPIRED BY NATURE, REFLECTING THE NATURE OF NATURAL WOOD

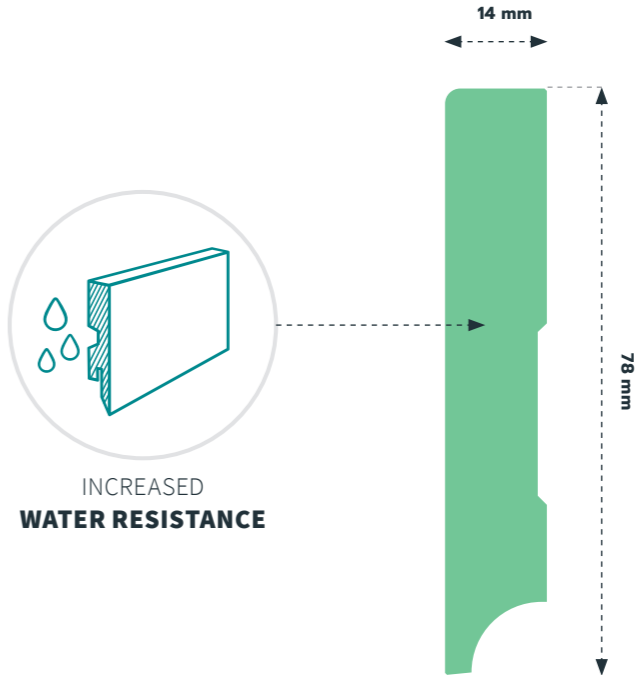

Experience acquired over the years and meticulous work on the selection of colors, such a combination creates the 80-th skirting board in its tasteful and elegant dimension.

Durability Redefined: Engineered using high-quality HDF, our skirting boards stand the test of time.

Resistant to warping, moisture, and wear, they maintain their integrity, providing long-lasting elegance for years to come.

BASE PRO

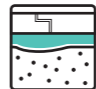

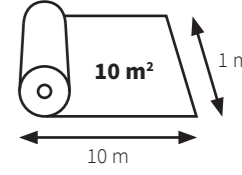

UNDERLAYS

**FLOOR UNDERLAYS ARE
A KEY ELEMENT THAT
AFFECTS THE COMFORT OF
USE, BUT ALSO PROTECTS
AND EXTENDS THE LIFE
OF THE ENTIRE FLOOR**

The key parameters of the underlay are: sound absorption, thermal insulation, protection against moisture, leveling unevenness.

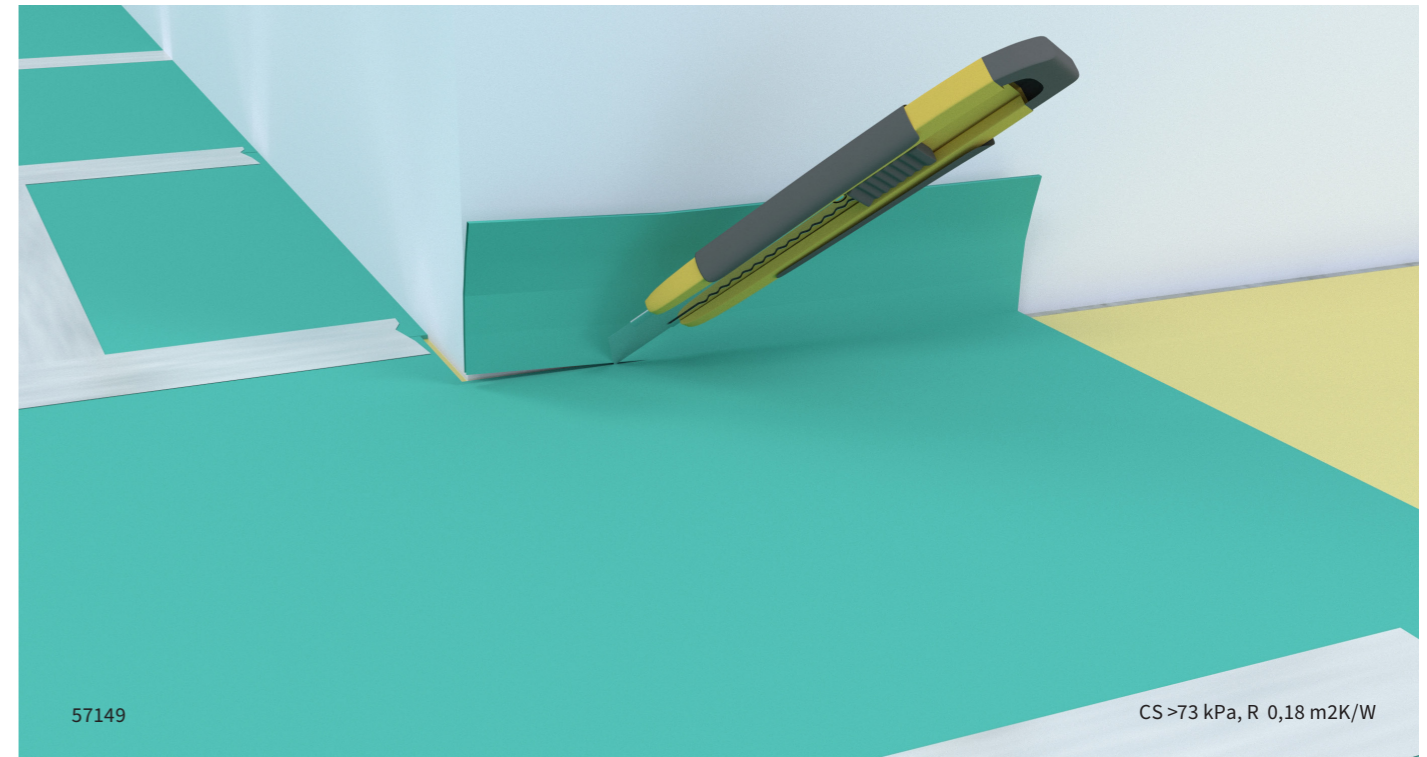

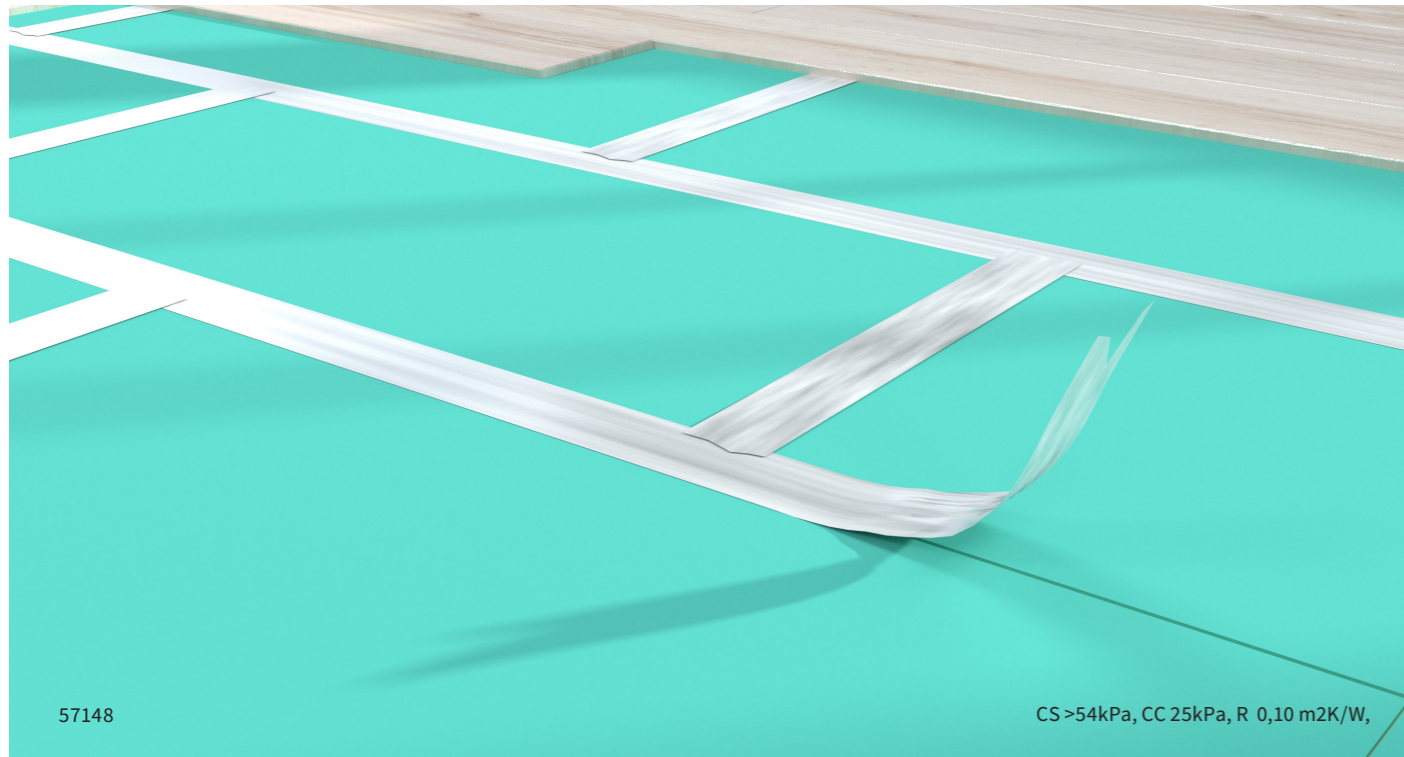

-  For heated floors
-  Simple to fix
-  Levelling of the base
-  Acoustic insulation
-  Perfect for Ceramin floors
-  Perfect for Herringbone floors
-  10 m²
10 m x 1 m

How to install skirtings

Ending of skirtings

GUIDELINES

HELPFUL MATERIALS

GUIDELINES FOR STORING AND INSTALLING BOARDS

Storage

It is important to store the skirtings in their original packaging in a room with a relative humidity of 45-65% and a temperature of 18-22°C, avoiding direct contact with the floor by placing them on an insulating layer such as a pallet, Styrofoam or cardboard.

Assembly

Before installation, the skirtings should be acclimatized in the room where they will be installed for at least 24 hours. In the room, it is important to measure the wall humidity and paint adhesion test, and the skirtings should be checked for possible defects and damage. Installation should be done using an appropriate base glue, eg. Mamut Clue by Den Braven, and a thermo-melt glue that attaches the skirtings to the wall until the base glue is fully set. Installation of the skirtings should include connecting them tightly together, and additional security measures, such as sealing the joints and the upper edge of the moulding, are equally important.

It is not recommended to use sealing compounds at the joint between the skirting and the floor made in the floating system.

The installer is responsible for any defects occurring during installation. Do not install skirtings with damage as this may void the warranty and the responsibility for the situation is transferred to the installer or buyer.

Maintenance

Maintenance of skirting boards should be regular, regular including sealing cracks and gaps with acrylic. Before installation in specific rooms, such as a bathroom or kitchen, it is necessary to check the humidity and temperature conditions. In humid rooms. It is recommended to use skirtings with increased moisture resistance with an HDF core, but their use in places at risk of flooding with water is excluded.

Exploitation

During operation. MDF/HDF skirting boards require that the air temperature and humidity be maintained at 18-22 °C and 40-60%, respectively.

When washing the floor, avoid water getting under the skirting and clean with a damp cloth.

Underfloor heating may affect the skirtings, so you should monitor their condition and if necessary, fill the gaps with acrylic. Changing the color of the moulding coating during use is a natural phenomenon, especially under the influence of sunlight.

However, remember to use it responsibly, bearing in mind that MDF skirtings are sensitive to moisture and require appropriate climatic conditions.

The manufacturer is not liable for defects resulting from incorrect installation or operation in accordance with specified conditions.

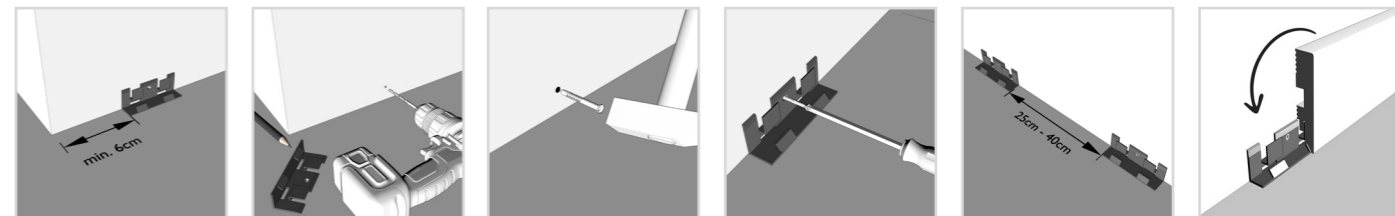

Manufacturer's liability

The manufacturer is not liable for defects resulting from improper installation or operation of the product, in particular for:

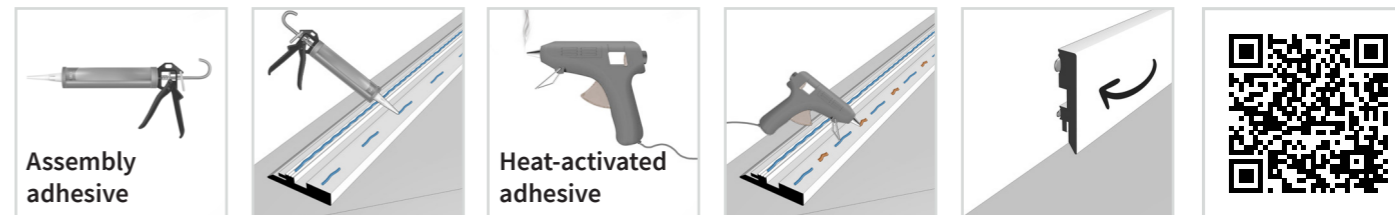

- product detaching from the wall due to incorrect installation
- product damage resulting from structural defects in the rooms, i.e. poor wall insulation and/or leaky windows and doors
- mechanical damage and defects resulting from them
- damage to the product resulting from flooding it with water or moisture
- defects resulting from normal wear and tear of the product, including natural color change due to sunlight
- defects resulting from failure to maintain appropriate climatic conditions throughout the life of the product.
